*LOA (Length Over All) Includes Swim platform and Bow Pulpit

Boat Year/Make/Color: _____

Trailer Plate: _____ RMI Trailer ID: _____

SERVICES

___ Marina Remove and Dispose of Shrink Wrap - \$100

___ Customer Remove and Dispose of Shrink Wrap (Customers removing their own wrap **MAY NOT** dispose of it at Marina Dumpster)

___ Install Camper/Enclosure Canvas - \$180 (No fee for installing cockpit cover)

Winterization Note - We reinstalled the drain plugs if we winterized the engines and left them ready to start this Spring. If your boat has a battery switch that does not fully disconnect the batteries, we ensured they were charged (charged batteries will not freeze) and disconnected the negative leads. Boats that have electric hatches may be left connected with a cord left accessible so the boat can be charged during the winter.

___ Summerization by Marina - \$180 We connect and charge your batteries, check your fluid levels, perform a general check-over of the engines and run them up to temperature.

___ Summerization by Owner - If we winterized the boat, simply connect the negative leads to the battery, check your fluid levels, and provide water to the engines (either by launching your boat, or connecting a garden hose on land) to start them. Watch instruments to ensure the engine does not overheat due to a lazy impeller or stuck thermostat on first start of the year. The rear drain plug must be installed by whoever is launching the boat.

___ Water pump (Impeller) Service Quote - Some impellers require replacement every 2-3 years depending on the application and amount of use.

Outboards and sterndrives that have the impeller in the lower unit need to be serviced on land, so we recommend replacing them proactively to avoid the expense of a mid-season haul out if your boat does not have a trailer.

___ Oil Change - \$240/Engine or Generator

___ Synthetic Oil Change - \$290/Engine

___ Install New Battery - \$50 + Cost of Battery

___ Fill & Flush Water System - \$50
